Introduction

In our view, there are essentially two distinct sorts of trades: the ones that arrangement with fiat cash; and the ones that arrangement simply in crypto. It is the last one that we will center around. Despite the fact that they are little now, we firmly trust that unadulterated crypto trades will be greater, ordinarily greater, than fiat based trades sooner rather than later. They will play a perpetually imperative part in world back and we call this new worldview Giltxchange; Binary Finance.

With your assistance, Giltxchange will manufacture a world-class crypto trade, controlling the eventual fate of crypto fund.

Problems

A portion of the current crypto trades experience the ill effects of various issues:

Poor technical architecture

Numerous trades are "set up together rapidly", by great tech individuals, yet who have practically zero involvement in fund or in working a trade. They frequently pick the most straightforward way to deal with get the framework up and running. While this may function admirably in the first place, as movement develops, the framework won't ready to deal with the expanded load. Trade frameworks should be built from the beginning with security, productivity, speed, and adaptability as a main priority. This regularly backs off the underlying advancement, however is basic for long haul achievement.

Our group has many years of joined experience constructing and keeping up world class budgetary frameworks that shape the economy. We see how these frameworks are developed starting from the earliest stage.

Insecure platform

There are several trades that went down due to being hacked.

Giltxchange is worked to elevated requirements, inspected, and entrance tried. We have encounter building money related frameworks to the most astounding security models and endeavor to guarantee security first.

Poor market liquidity

Proficient brokers and typical clients are essentially influenced by this. Having a shallow order book implies high slippage when exchanging, which is exceptionally costly for merchants. Getting diggers, institutional financial specialists and extensive merchants into another trade is a chicken and egg issue, and requires a group with profound industry assets.

Giltxchange's group has been in both the fund and crypto industry for a long time. The group has chipped away at and worked various trades, and have aggregated a substantial system of accomplices in this space. These accomplices will be enter in bootstrapping the trade.

Poor customer service:

Merchants are an alternate breed with regards to clients. Understanding the merchant mindset is indispensable for running a fruitful trade. Cash is actually on hold. Numerous trades benefit dealers as though they were running a web-based social networking website. A 3-second deferral in observing your companions' announcement would scarcely be seen, however on a trade, the same would be unsuitable, bringing about a downpour of client objections.

In extra to the innovation stack, Giltxchange is worked on account of administration. Giltxchange shares bolster obligations over the whole staff and friends. At the point when a broker has an issue, they find a solution specifically from somebody who knows the framework and not somebody perusing from a content.

Poor internationalization and language support

Blockchains have no outskirts. Most trades concentrate just on one dialect or one nation.

Our universal multi-lingual group has broad working knowledge in North America, Europe and Asia, and we can easily bolster the worldwide market.

Giltxchange Exchange:

Matching Engine:

Our coordinating motor is fit for maintaining 1,400,000 requests/second, making Giltxchange one of the speediest trades in the market today. You can be sure, on our trade, that your requests will never be adhered because of the coordinating motor being overpowered.

Feature Rollout:

We will roll out the platform in roughly the following order:

- Spot trading
- Margin trading
- Futures
- Anonymous instant exchange
- Decentralized (on-chain) exchange and more...

Coins

Giltxchange will support the trading pairs in the following coins:

- Bitcoins
- Ethereum
- Litecoin
- NEO
- GIX (Giltx Coin)

We will reveal the stage in generally the accompanying request: More coins will be included after some time. We by and large will just include coins that have solid validity, client base, and liquidity. In the event that you have a coin that you wish to be recorded on Giltxchange later, taking an interest in our ICO will help.

We have no plans to help any fiat monetary standards, for example, USD, RMB, JPY, or KRX.

Device Coverage

We are offering cross-platform trading in the following services:

Android native client

- iOS native client (pending App Store review)
- Mobile HTML5 client (including WeChat H5 client)
- PC (Windows) native client
- REST API

Multilingual Support

We will bolster English, Chinese, Japanese and Korean on the greater part of our UIs. (The exceptionally introductory discharge will be in English and Chinese just.) More dialects will be included after some time.
